

## Conductivity sensor for hygienic applications

Type 8221 can be combined with...

**Type 8200**  
Hygienic holder for con-  
ductivity sensor (PG13.5)

**Type 8619**  
Panel multiCELL  
transmitter/controller

**Type 8619**  
Wall-mounted multiCELL  
transmitter/controller

- Perfect for demanding applications in the hygienic industry (CIP and SIP compatible)
- Variants available for usage over a wide conductivity range
- Due to support of the most important process connections specific customer requests can be implemented
- Fits perfectly to our multipurpose transmitter/controller type 8619

The 8221 hygienic conductivity probes are used to determine electrical conductivity in a wide range of pure or concentrated liquids.

Due to their hygienic design and the robust construction, these conductivity probes are suitable for use under demanding conditions in application sectors including food & beverage, pharmaceutical, biotechnology and the general chemical industry.

Two technologies of conductivity probes are available:

- probes based on the 2-electrode principle are suited for measurements in liquids, especially (ultra) pure water. Contamination affects the measurements.
- probes based on the 4-electrode principle exclude polarization phenomena and are not sensitive to contamination. This clever design guarantees an excellent linearity over a wide conductivity range.

An integrated temperature sensor (Pt1000) is a standard feature of all versions and can be used for temperature compensation.

The probe has to be connected to the multi-CELL transmitter/controller type 8619.

### 4-electrode conductivity probe

#### - short or long insertion version

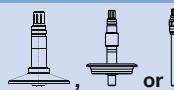

<b>Process connection</b>	1½" clamp connection or G1¼" process connection (on request)
<b>Technology</b>	4-electrode
<b>Measuring range</b>	0.1 µS/cm...500 mS/cm
<b>Linearity<sup>1)</sup> (relative)</b>	±0.5...5 %
<b>Cell constant<sup>2)</sup></b>	0.147 cm⁻¹
<b>Temperature sensor</b>	Pt1000
<b>Materials</b>	
Electrode	Stainless steel 1.4435/316L
Frame	PEEK (conform to FDA)
Seal	Stainless steel 1.4435/316L EPDM (conform to FDA)
<b>Surface quality</b>	0.4 µm, electro-polished
<b>Medium temperature</b>	-20...+135 °C (-4...+275 °F)
<b>Medium pressure</b>	Max. 6 bar (87.06 PSI)
<b>Electrical connections</b>	VarioPin (VP 6.0)
<b>Certificates</b>	FDA declaration of conformity (only for version with PEEK frame and EPDM seal); ECR1935/2004 declaration, USP class VI declaration; Inspection certificate 3.1; On request: 2-point calibration certificate

<sup>1)</sup> Uncertainty of ±5 % arises when using only one single cell constant for the full range. ±0.5 % measurement deviation can be achieved when calibration is performed in a conductivity range close to that of the used solution.

<sup>2)</sup> Individual cell constant measured with the Burkert standard procedure. The cell constant can be influenced by the assembly situation.

**4-electrode conductivity probe**

<b>Process connection</b>	2" clamp connection 2" (DN50/40) connection adapted for GEA Tuchenhagen VARINLINE PG13.5 connection
<b>Technology</b>	4-electrode
<b>Measuring range</b>	1 µS/cm...500 mS/cm
<b>Linearity<sup>1)</sup> (relative)</b>	±0.5...5 %
<b>Cell constant<sup>2)</sup></b>	0.360 cm <sup>-1</sup>
<b>Temperature sensor</b>	Pt1000
<b>Materials</b>	
Electrode	Stainless steel 1.4435/316L
Frame	PEEK (conform to FDA)
Seal	Stainless steel 1.4435/316L (not for PG13.5 connection) EPDM (conform to FDA)
<b>Surface quality</b>	0.4 µm, electro-polished
<b>Medium temperature</b>	-20...+135 °C (-4...+275 °F)
<b>Medium pressure</b>	Max. 6 bar (87.06 PSI)
<b>Electrical connections</b>	VarioPin (VP 6.0)
<b>Certificates</b>	FDA declaration of conformity (only for version with PEEK frame and EPDM seal); ECR1935/2004 declaration, USP class VI declaration; Inspection certificate 3.1; On request: 2-point calibration certificate
2" (DN50/40) connection adapted for GEA Tuchenhagen VARINLINE	EHEDG certified

**2-electrode conductivity probe with M12 connector**

<b>Process connection</b>	1½" clamp connection
<b>Technology</b>	2-electrode
<b>Measuring range</b>	0.05...20 µS/cm
<b>Linearity<sup>1)</sup> (relative)</b>	±0.5...5 %
<b>Cell constant<sup>2)</sup></b>	0.01 cm <sup>-1</sup>
<b>Temperature sensor</b>	Pt1000
Response time (t90)	60 s
<b>Materials</b>	
Electrode	Stainless steel 316L
Frame	Stainless steel 316L and PEEK (conform to FDA - 21CFR 177.2415)
Seal	EPDM (conform to FDA - 21CFR 177.2600)
<b>Surface quality</b>	0.4 µm, electro-polished
<b>Medium temperature</b>	-20...+150 °C (-4...+302 °F)
<b>Medium pressure</b>	Max. 7 bar (100 PSI)
<b>Electrical connections</b>	5 pin M12 male fixed connector
<b>Standards, directives and certifications</b>	
<b>Protection class</b>	IP67 (according to EN 60529)
<b>Standards and directives CE</b>	The applied standards, which verify conformity with the EU Directives, can be found on the EU Type Examination Certificate and/or the EU Declaration of conformity (if applicable) Complying with article 4, §1 of 2014/68/EU directive*
Pressure	
<b>Certificates</b>	Inspection certificate 3.1; On request: 2-point calibration certificate; FDA declaration of conformity (only for version with stainless steel and PEEK frame and EPDM seal); Test report 2.2 for surface finish

<sup>1)</sup> Uncertainty of ±5 % arises when using only one single cell constant for the full range. ±0.5 % measurement deviations can be achieved when calibration is performed in a conductivity range close to that of the used solution.

<sup>2)</sup> Individual cell constant measured with the Bürkert standard procedure. The cell constant can be influenced by the assembly situation.

\* For the 2014/68/EU pressure directive, the device can only be used under the following conditions (depends on max. pressure, pipe diameter and fluid).

Type of Fluid	Conditions
Fluid group 1, article 4, §1.c.i	DN ≤ 25
Fluid group 2, article 4, §1.c.i	DN ≤ 32 or PN*DN ≤ 1000
Fluid group 1, article 4, §1.c.ii	DN ≤ 25 or PN*DN ≤ 2000
Fluid group 2, article 4, §1.c.ii	DN ≤ 200 or PN ≤ 10 or PN*DN ≤ 5000

**2-electrode conductivity probe with cable**

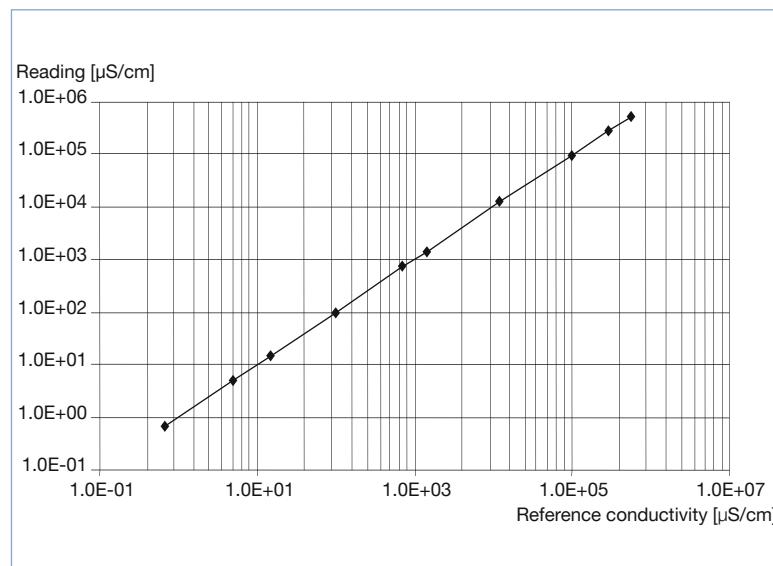

<b>Process connection</b>	1½" clamp connection
<b>Technology</b>	2-electrode
<b>Measuring range</b>	0.05...20 µS/cm    1...200 µS/cm    5...5 000 µS/cm
<b>Linearity<sup>1)</sup> (relative)</b>	±0.5...5 %    ±0.5...5 %    ±0.5...5 %
<b>Cell constant<sup>2)</sup></b>	0.01 cm <sup>-1</sup> 0.1 cm <sup>-1</sup> 1 cm <sup>-1</sup>
<b>Temperature sensor</b>	Pt1000
<b>Materials</b>	
Electrode	Stainless steel
Frame	Stainless steel and PTFE
Seal	EPDM
<b>Surface quality</b>	0.4 µm, electro-polished
<b>Medium temperature</b>	Max. 120 °C (248 °F)
<b>Medium pressure</b>	Max. 7 bar (100 PSI)
<b>Electrical connections</b>	Cable, length 3 m, instrument side with open wire
<b>Certificates</b>	Inspection certificate 3.1; 2-point calibration certificate (on request)

<sup>1)</sup> Uncertainty of ±5 % arises when using only one single cell constant for the full range. ±0.5 % measurement deviations can be achieved when calibration is performed in a conductivity range close to that of the used solution.

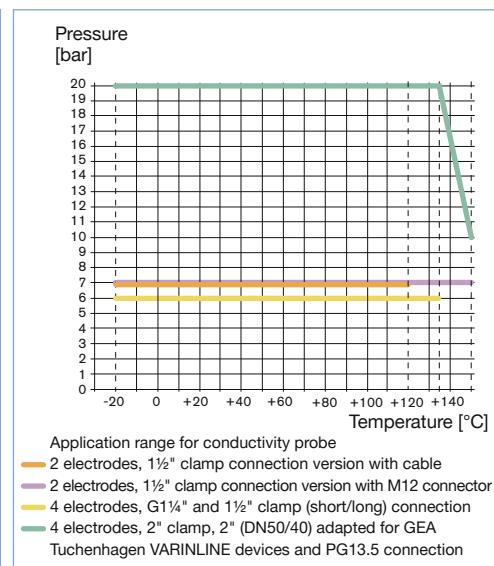

<sup>2)</sup> Individual cell constant measured with the Bürkert standard procedure. The cell constant can be influenced by the assembly situation.

## Technical data (continued)

### Unique linearity of the 8221 4-electrode conductivity probe

### Pressure/temperature chart

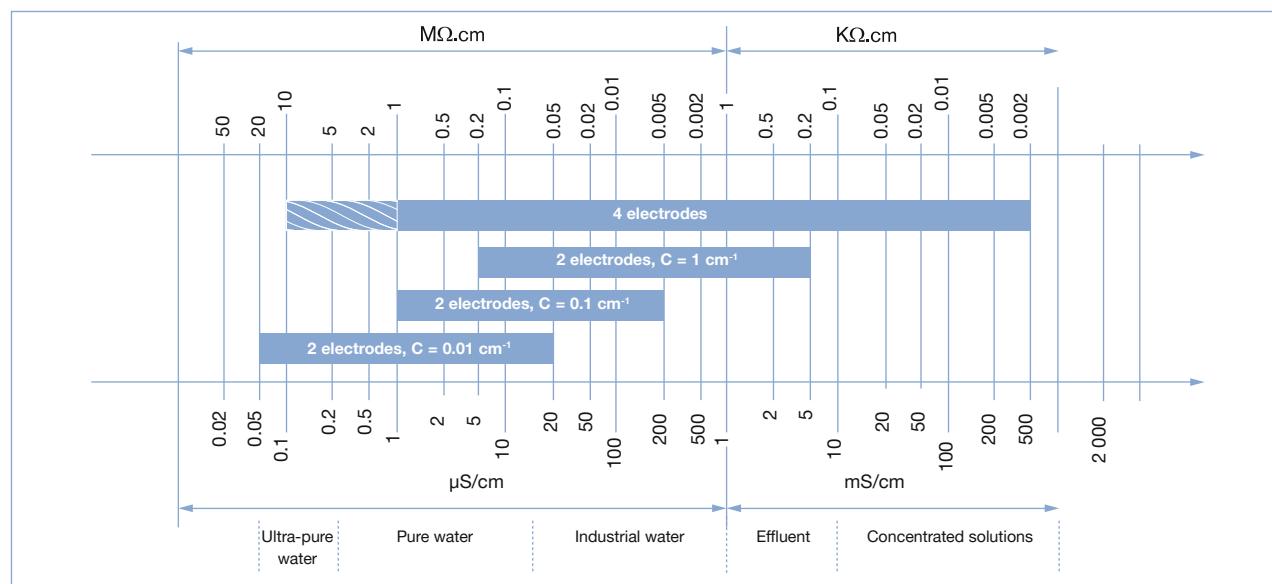

### Principle of operation - Electrodes measuring range

Conductivity is defined as the ability of a solution to conduct electrical current. The load carriers are ions (e.g. dissolved salt or acids).

In the simplest case the measurement cell consists of two metal electrodes which are set at a fixed distance apart and with a known specified surface. An AC voltage supplied from the connected transmitter/controller type 8619 is applied to the electrodes. The measured current is a direct function of the quantity of ions contained in the solution, and with help of Ohm's law the conductivity is calculated.

The 4-electrode probe consists of two current and two voltage electrodes. Between the two current electrodes there is a constant electric current. With the two voltage electrodes a voltage drop is measured across the sample. The voltage drop depends on the conductivity of the sample. Because of this measurement principle, 4 electrode sensors have a much broader linear measurement range, are not sensitive to contamination and excludes the polarization phenomena.

There are countless types of conductivity probes whose measurement values vary by a great margin - depending on the electrode assembly. To compensate for the geometry of the conductivity cell a cell constant is used: Conductivity [ $\mu\text{S}/\text{cm}$ ] = Measurement [ $\text{S}$ ] x Cell constant [ $1/\text{cm}$ ]. The cell constant is either known or it is determined by means of conductivity standards, and has to be entered into the transmitter prior to measurement.

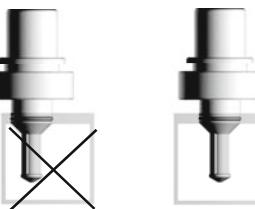

## Installation

### 4-electrode conductivity probe with 1½" clamp or G1¼" process connection

The process connection must be sufficiently clean. Install the conductivity probe following the instructions mentioned below.

The cell constant and the linearity of the probe can vary with the fitting situation. A symmetrical setup is recommended. Leave a minimum space of 60 mm minimum diameter.  
Partitions made of non-conductive material should preferably be used.

A symmetrical setup is recommended in order to ensure a high degree of linearity. To achieve high precision the cell constant should be calibrated in the final setup.  
Make sure that all the 4 electrodes are completely and continuously immersed in the measuring sample.

### 4-electrode conductivity probe with PG13.5 process connection

To install the conductivity probe into a T fitting or pipe, a probe holder type 8200 has to be used. Please refer to the corresponding datasheet, for more information.

#### More info.

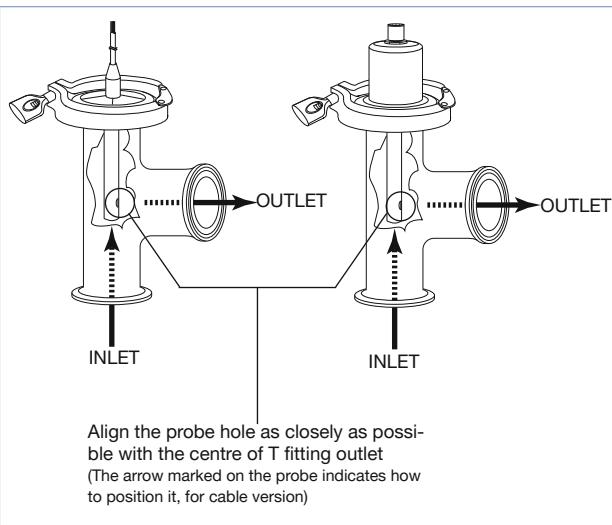

For more technical information about this product, click on this box... you will come to our website for this product where you can download the datasheet.

Around the tip of the electrode there should be a space of 10 mm.

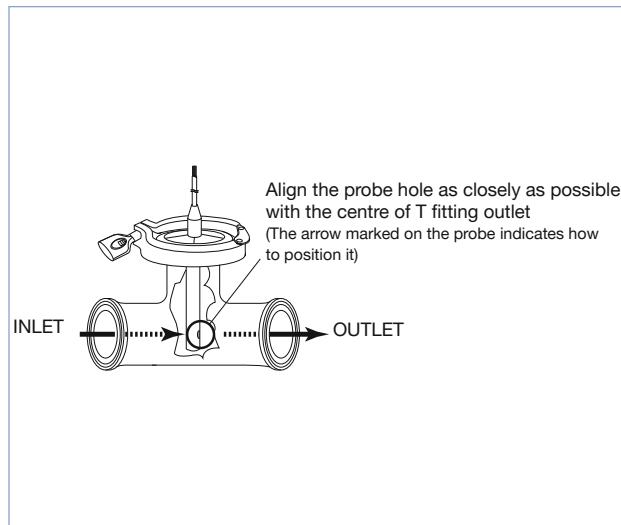

### 2-electrode conductivity probe with clamp process connection

Mount the probe **with cell constants  $0.01 \text{ cm}^{-1}$**  in a stainless steel sanitary T fitting 1½" as shown below.

Align the probe hole as closely as possible with the centre of T fitting outlet  
(The arrow marked on the probe indicates how to position it, for cable version)

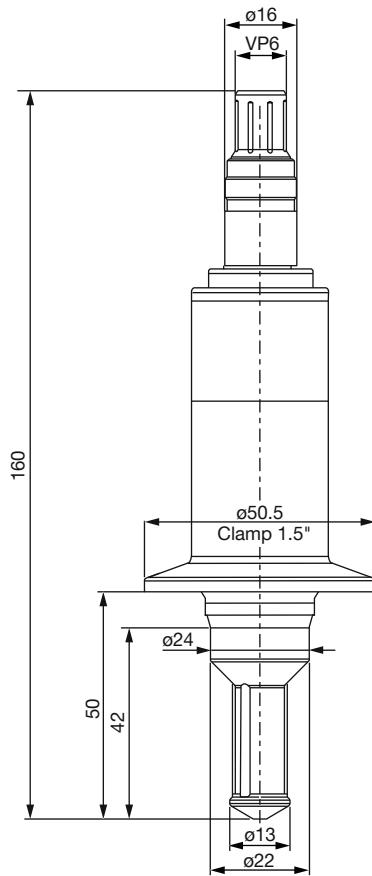

Mount the probe **with cell constants  $0.1$  or  $1.0 \text{ cm}^{-1}$**  in a stainless steel sanitary T fitting 1½" as shown below.

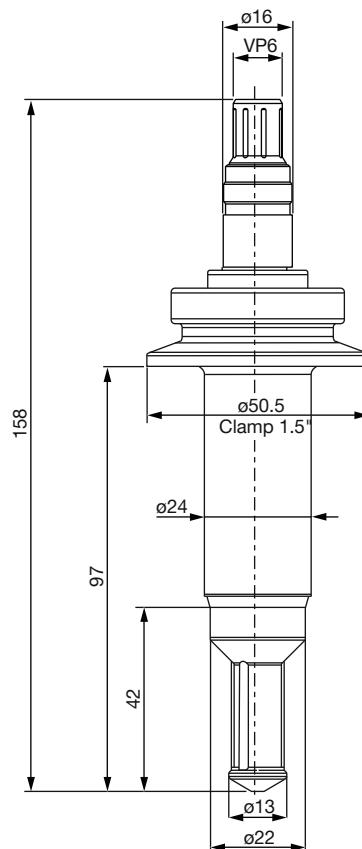

Align the probe hole as closely as possible with the centre of T fitting outlet  
(The arrow marked on the probe indicates how to position it)

**Dimensions [mm]**

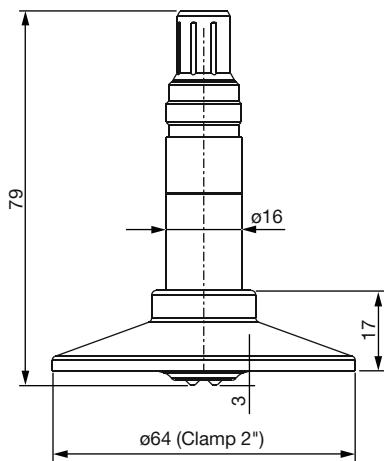

**4-electrode probe, short insertion version**  
with 1½" clamp connection

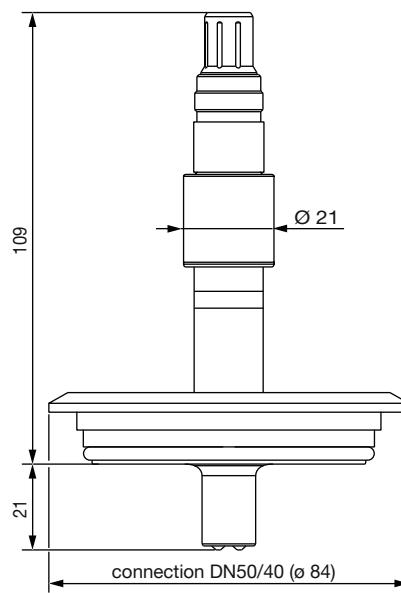

**4-electrode probe, long insertion version**  
with 1½" clamp connection

**4-electrode probe version**  
with 2" clamp connection

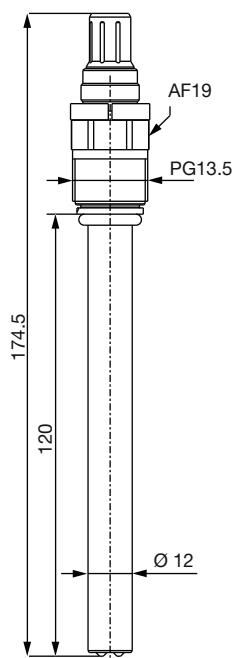

**4-electrode probe version**  
with 2" (DN50/40) connection adapted for GEA Tuchenhangen  
VARINLINE process connections  
EHEDG certified design

## Dimensions [mm] (continued)

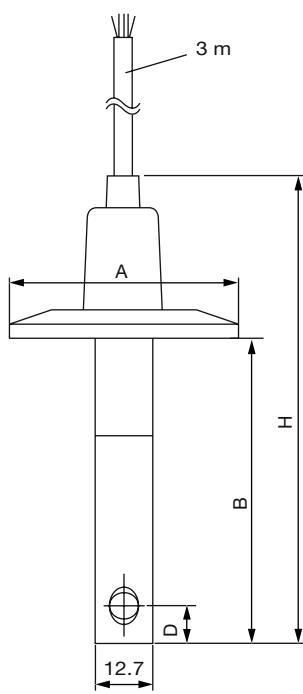

### 4-electrode probe version

with PG13.5 connection

### 2-electrode probe version

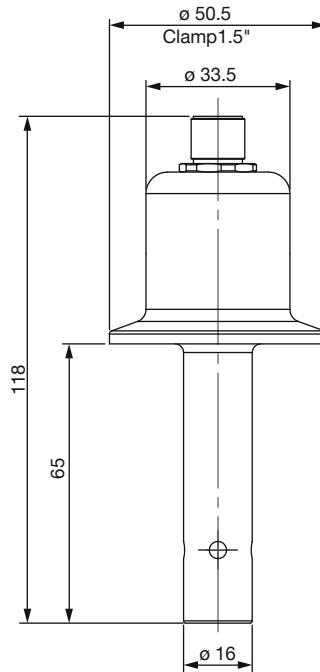

with 1½" clamp connection and with cable 3 m open wire

Probe with	A	H	B	D
